PROFILE

Full-stack engineer who designs and ships web and mobile products end to end, in TypeScript from the database to the interface. I care most about the parts users never see: access rules proven by tests, and records that survive a dropped connection. I also teach AI and software development.

PRODUCTS

LearnMe · multi-tenant learning platform — learnme-nine.vercel.app

Next.js 16 · React 19 · TypeScript · Supabase (PostgreSQL, Auth, Storage) · Tailwind CSS 4

- Designed and built a platform where each academy runs its own branded school on one app and one database: course builder, classes, assignments and marking, live sessions and a file library.
- Enforced tenant isolation with row-level security on every academy-owned table, proven by 618 pgTAP tests that sign in as another academy's owner, admin and learner. The request's host decides the academy.

Airpay · savings and money-management app for Sierra Leone — iOS and Android · v0

Expo · React Native · NestJS · Drizzle ORM · PostgreSQL · TypeScript

- Built the app and its API: a daily safe-to-spend amount worked out from money left, upcoming payments, planned savings and days to payday, with savings goals, Insights and History.
- Records queue on the phone and sync in order when the connection returns; a record sent twice is saved once. SMS sign-in with single-use refresh tokens. CI on GitHub Actions, iOS builds with EAS.

Sahid · Qur'an memorisation and classroom app — iOS and Android · in development

Expo · React Native · Supabase · TypeScript

- One app for four roles (Sheikh, teaching assistant, student, parent): assignments, a review queue for recitations, progress points and streaks, schedules and calls.

Nakam Gaming Platform · real-time games with wallets — rollbet-arena.vercel.app

- Built live lobbies, several game modes, leaderboards, a wallet and tournaments for a client, in React, TypeScript and WebSockets.

EXPERIENCE

Facilitator, AI & Software Development · Altruistech Luminary Center — Jul 2026 – Jan 2027

- Wrote a five-month curriculum covering AI foundations, prompt engineering and full-stack development.
- Mentor students through capstone projects with code reviews and architecture guidance.

Independent Software Engineer · Self-employed — 2024 – present

- Shipped 4+ production applications for local and international clients across e-commerce, logistics, non-profits and gaming, owning scope, architecture, build, deployment and handoff.
- Built n8n automations joining CRMs, payment processors and messaging tools, cutting manual operations work by 60%+ for several clients.

Full-Stack Developer · Sendme SL (logistics and e-commerce) — 2025 – 2026

- Built and shipped features across the logistics platform: order management, tracking and vendor systems, from database to deployment.

Frontend Developer Intern · KNS (Knowledge Network Solutions) — 2024

- Built role-based access control interfaces and real-time threat-monitoring dashboards at a cybersecurity firm; offered a full-time role at the end.

SKILLS

Web	TypeScript, React, Next.js, Tailwind CSS, Vite
Mobile	React Native, Expo, Expo Router, offline sync
Backend and data	Node.js, NestJS, PostgreSQL, Supabase, row-level security, Drizzle ORM, REST / OpenAPI
Quality and delivery	Playwright, Vitest, Jest, pgTAP, GitHub Actions, Vercel, EAS Build, n8n

EDUCATION

Limkokwing University of Creative Technology · Sierra Leone — Languages: English, Krio, Fullah
